Abstract of JP 2000222163 (A)

PROBLEM TO BE SOLVED: To make the part between an information processor such as a personal computer and a data display device such as a projector wireless, to efficiently and reliably transfer data to be displayed to a data display device side and to perform networking further.

SOLUTION: The personal computer 1 is provided with a radio communication module part 11 for enabling data communication with other equipment by radio waves and the data to be displayed are transmitted as a file by the radio communication module part 11. The projector 2 is similarly provided with the radio communication module part 21 as well. Also, the projector 2 is provided with a data preservation means for preserving the file to be displayed sent from the personal computer 1, a display data processing means which is provided with a viewer function corresponding to the type of the file to be displayed preserved in the data preservation means and analyzes the type of the file activating the viewer function suited to it and prepares display data and a display means for displaying the display data prepared by the display data processing means.
